PD
PERFECT DURABILITY
NEEDLES

Lasts Five Times Longer Than Chrome-Plated Needles

Productivity of automated and unmanned sewing equipment is limited by the life of their needles. **PD** titanium coated needles are significantly stronger than other needles while maintaining elasticity. This reduces needle breakage, bending and distortion. **PD** needles are more wear resistant than conventional chromium plated needles. **PD** needles provide perfect reliability and durability in prolonged stitching operations.

Stronger at the Point of the Needle

Organ's process for making **PD** needles also strengthens the point of the needle. The point of a needle is exposed to high pressures causing needle wear and breakage. The strength of the needle has been reinforced while maintaining a perfect shape in order to provide greater wear resistance and durability.

Test of Wear with a Chrome Plated Needle

Test of Wear with a PD Needle

**Using PD needles means better quality stitches, less downtime, higher productivity
And lower cost production.**

ORGAN® SK1 needles

Deeper Scarf

Modified cross-section of needle blade makes needle more rigid to prevent needle deflection, reduces needle vibration and needle breakage.

Dual Side Scarves

Both sides scarves are designed to avoid collision with point of sewing hook, prevent needle vibration, protect the wearing of the point of the sewing hook. Because of the dual side scarves, the needle can be used with rotary hook, horizontal type of rotary hook and shuttle hook.

Cross-Section of Dual Scarves

Small Crank

Small crank has the following advantages:

- 1 Minimizes needle vibration.
- 2 Easier adjustment to needle plate
- 3 Better adjustment of scarf and point of sewing hook.
