Confidential And Proprietary Information

The materials contained herein are confidential and proprietary information of Atlanta Attachment Company. In addition to any confidentiality and non-disclosure obligations that currently exist between you and Atlanta Attachment Company, your use of these materials serves as an acknowledgment of the confidential and proprietary nature of these materials and your duty not to make any unauthorized use or disclosure of these materials.

All materials contained herein are additionally protected by United States Copyright law and may not be used, disclosed, reproduced, distributed, published or sold without the express written consent of Atlanta Attachment Company, which consent may be withheld in Atlanta Attachment Company's sole discretion. You may not alter or remove any copyright, trademark or other notice from copies of these materials.

Patents & Patents Pending

The sale of this product does not sell or otherwise transfer any license or other rights under any U.S. Patent or other corresponding foreign patent.

This equipment is protected by one or more of the following patents:

US patents: 4,038,933; 4,280,421; 4,432,294; 4,466,367; 4,644,883; 4,886,005; 5,134,947; 5,159,889; 5,203,270; 5,307,750; 5,373,798; 5,437,238; 5,522,332; 5,524,563; 5,562,060; 5,634,418; 5,647,293; 5,657,711; 5,743,202; 5,865,135; 5,899,159; 5,915,319; 5,918,560; 5,924,376; 5,979,345, 6,035,794
Foreign patents - 2,084,055; 2,076,379; 2,177,389; 2,210,569; 4-504,742; 8-511,916; 9-520,472; 0,537,323; 92,905,522.6; 95,935,082.8; 96,936,922.2; 5,159,889; 5,203,270.
Other U.S. and Foreign Patents Pending.

IMPORTANT

It is important to read and understand the information contained within this manual before attempting to operate the machine. Atlanta Attachment Co., Inc. shall not be held liable for damage resulting from misuse of the information presented within, and reserves the right to change the information contained within, without prior notification.

Safety Precautions

It is important that the machine operator read this manual and is familiar with all the functions and safety concerns of the unit before operating.

General

The safety guidelines mentioned in this manual cover the entire product line of Atlanta Attachment Company. Some warnings and/or instructions may not apply to this particular unit.

All maintenance should be performed by a qualified service technician.

Electrical

- Electrical connection requires 220vAC, 5 Amp, 50/60 Hz Single Phase
- Disconnect the power source before threading or replacing the needles.
- Disconnect the power source before leaving the machine unattended.
- Disconnect the power source before removing or replacing parts or making adjustments and/or performing maintenance.
- Disconnect the power source before opening electrical control panels.

Pneumatics

Air supply requires 80 PSI, 2 SCFM avg.

From the library of: Diamond Needle Corp

Knives

- This machine may utilize knives and/or thread cutters that may activate automatically.
- Keep hands away from knife blades at all times.
- Disconnect power source and air supply before replacing damaged blades.

Conveyors

- This unit may include material conveyors.
- Keep hands away from belts.
- Keep hands away from motors and pulleys used to power the conveyors.

Pullers

- This unit may include pullers used to pull material into a sewing head, knife, etc.
- Keep hands away from pullers.

Sewing Heads

- Keep hands and all other objects away from needles.
- Disconnect power source and air supply before making adjustments to the sewing head, replacing needles, threads, bobbins, etc.

Touch Screen Operation

The graphics images presented on the touch screen show "3-dimensional" buttons, which may be pressed to access other screens, change counters and timers, or actuate hardware. Areas lacking the "3-dimensional" border contain information only. Counters are identified with the "+" and "-" buttons in the corners. These counters may be adjusted by pressing the "+" and "-" boxes. Pressing the dark area of the counter button will access another screen that gives detailed information about the counter and how to adjust it. Pressing RESET from any screen clears all machine functions and returns to the READY page. Normal operation of the machine is controlled from the READY page. The READY page allows anyone to access the necessary functions and adjustments needed for normal operation of the machine. There are also advanced functions that are only accessible by an authorized mechanic and include: timers and counters that control machine hardware, input and output test screens, and machine statistics. To get to the advanced functions the appropriate password must be entered at the security screen. Security access is reset whenever the main power is turned off, or the RESET button on the READY page is pressed.

Calibrating The Touch Screen

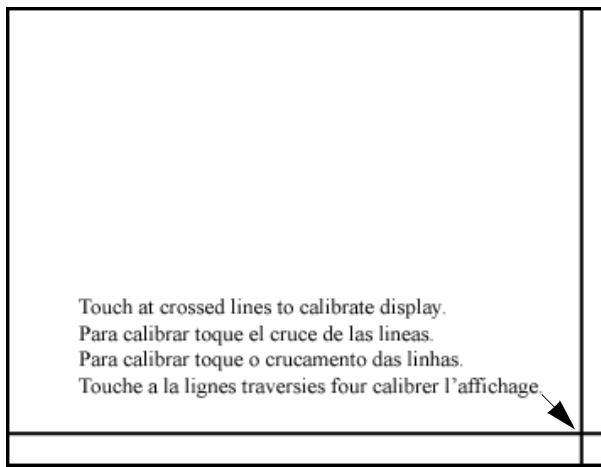

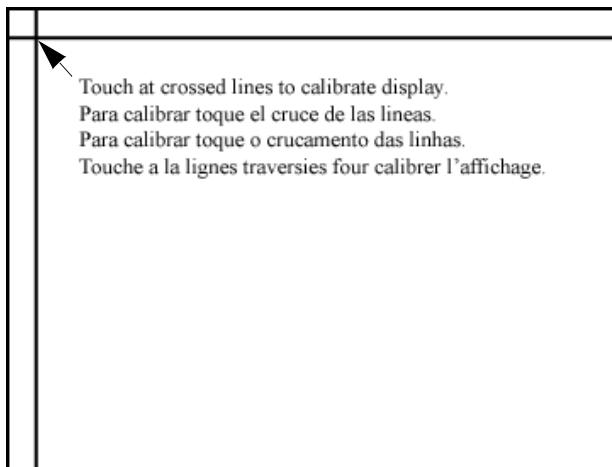

Press the red stop button located above the touch screen.

Place one finger on the screen and hold it there while pushing the green on button located above the touch screen. Keep one finger on the screen until the display looks like the image shown below.

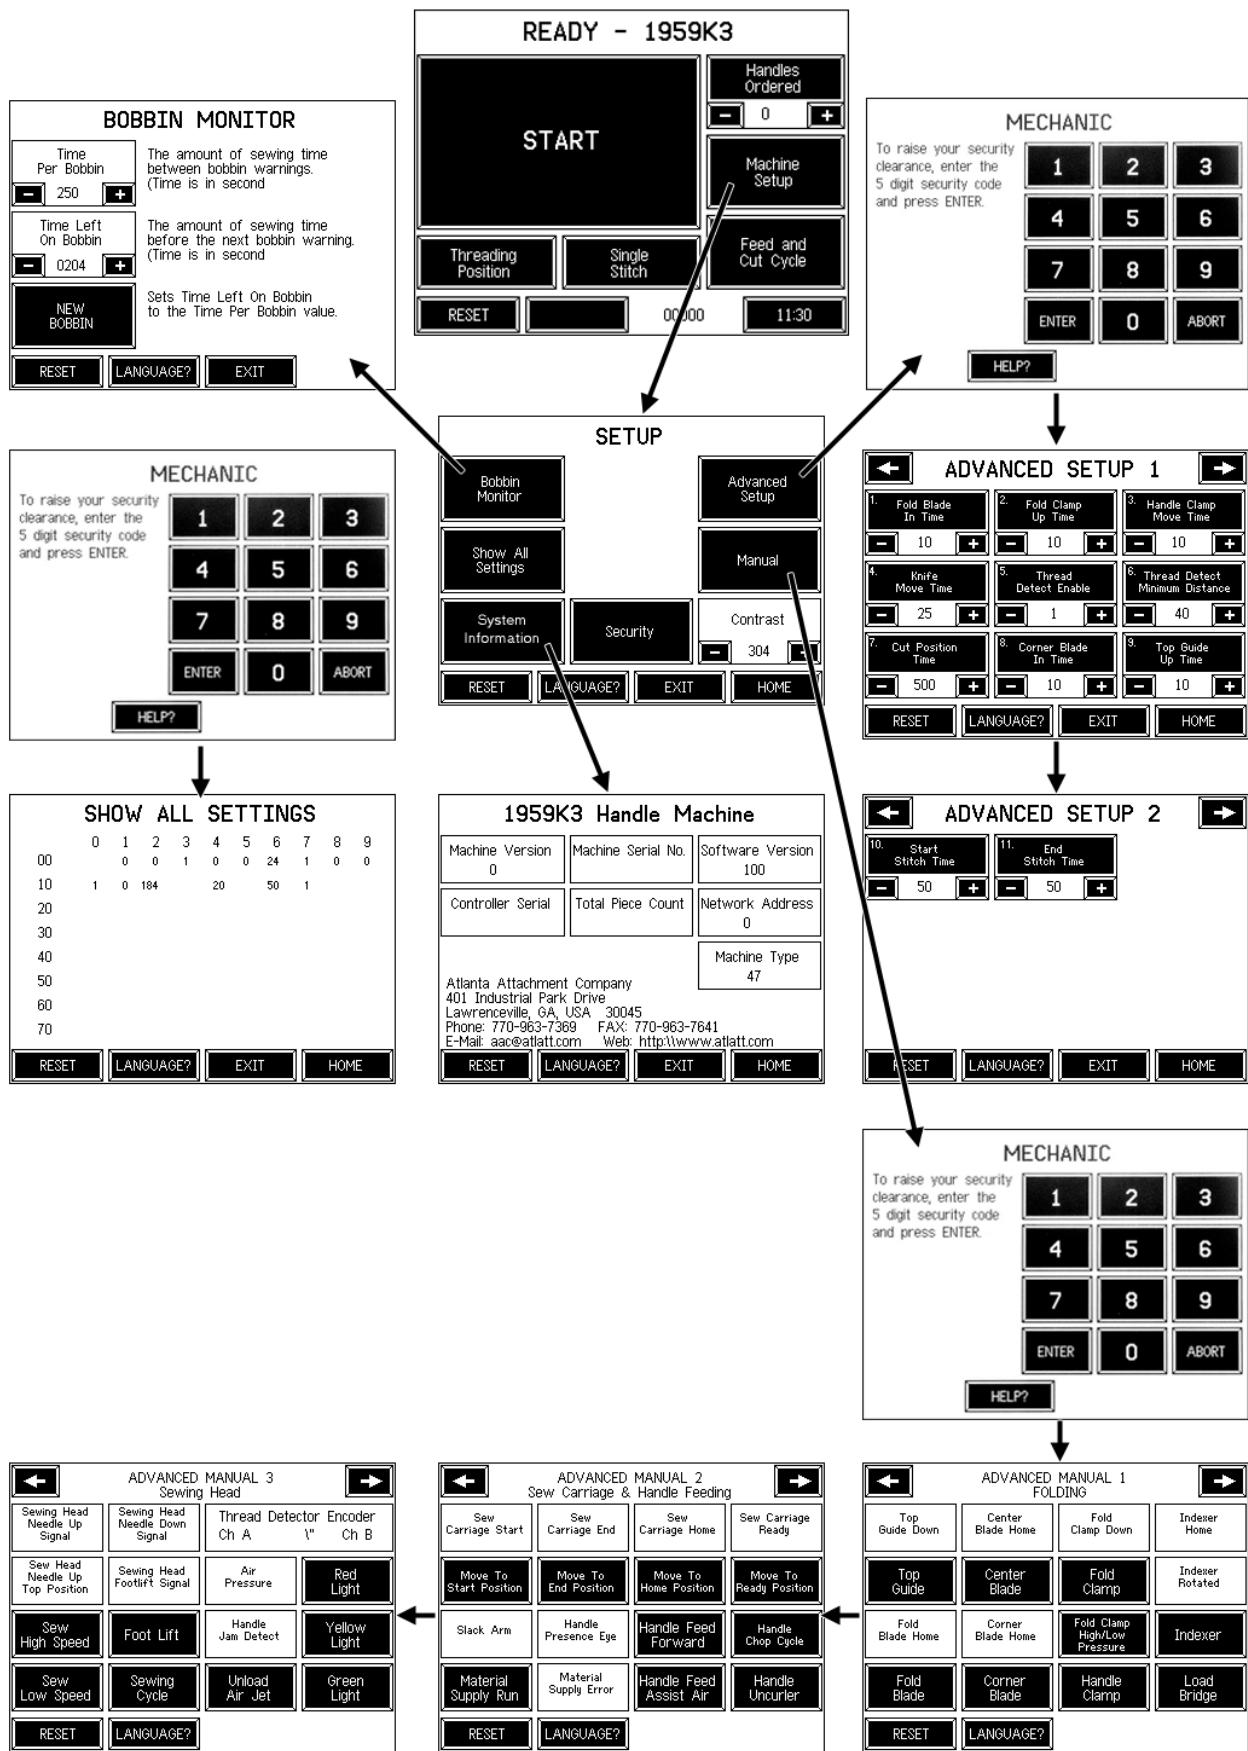

Touch the screen the the crossed lines in the upper left corner of the screen.

The display will then tell you to touch the screen at the crossed lines in the lower right corner. The screen is now calibrated.

Press the Reset button on the next screen.

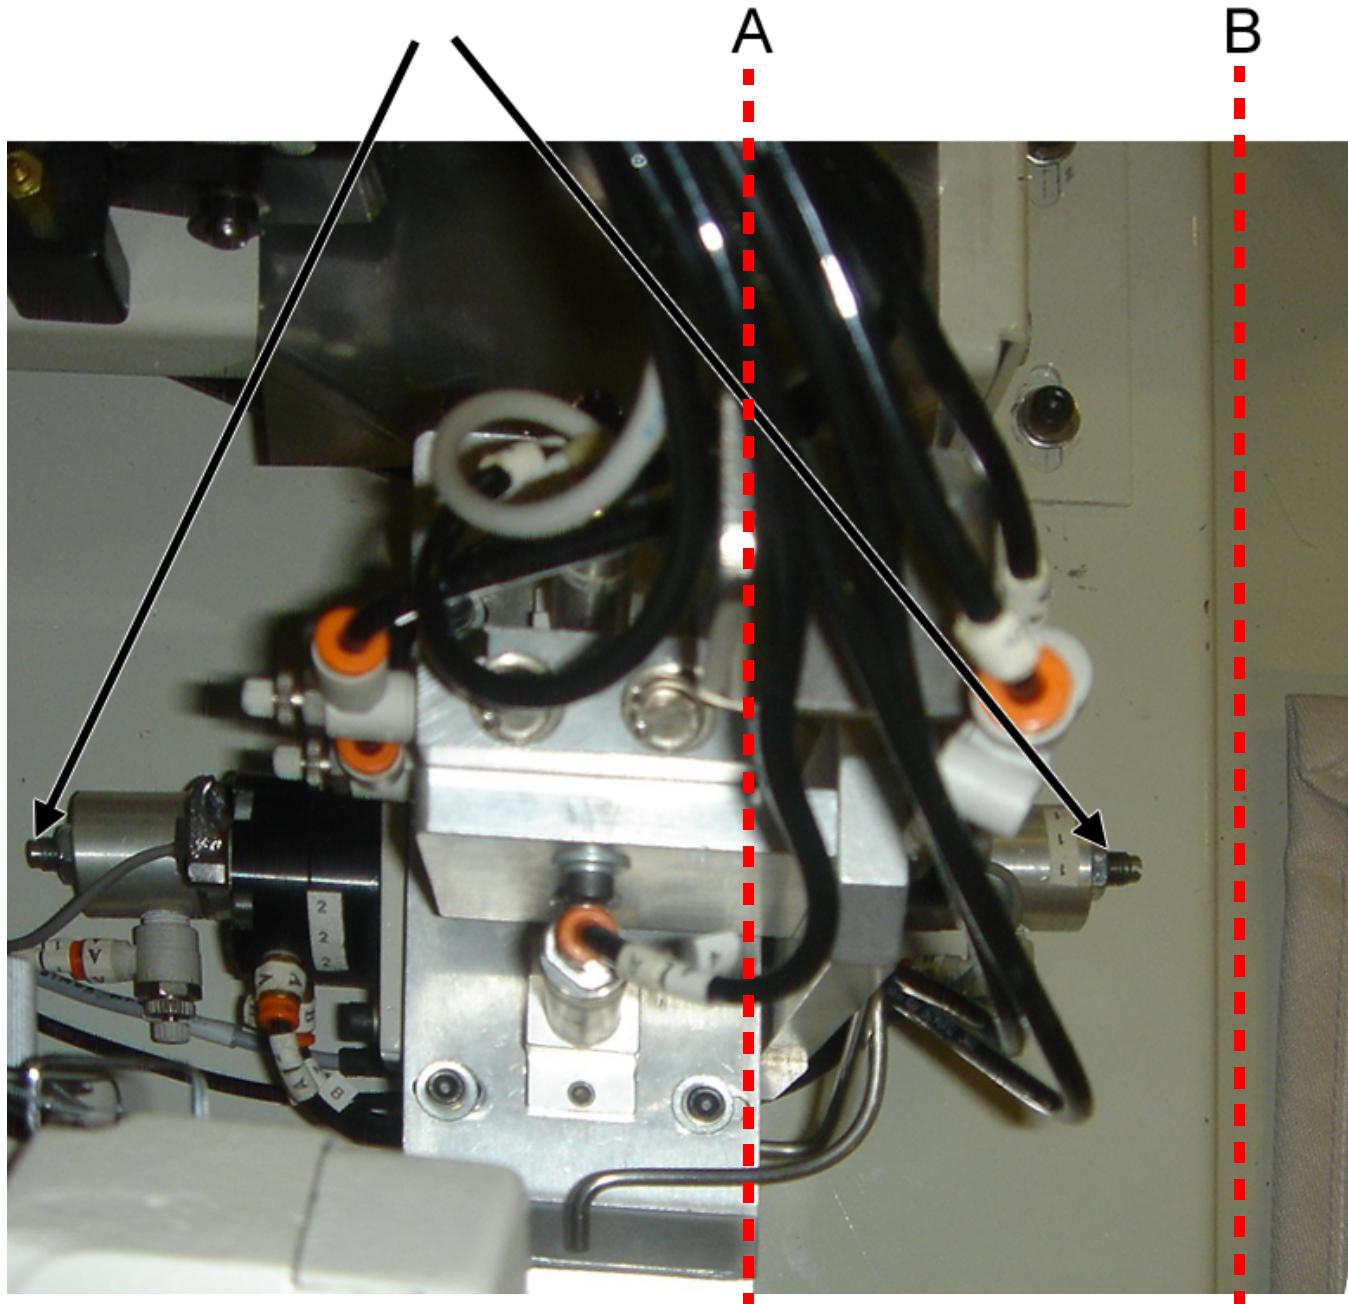

Map of Common Screens

Adjustments**Aligning The Rotation Bridge****Important:**

Rotation Bridge must be parallel with front edge of the machine stand on both positions (A parallel to B).

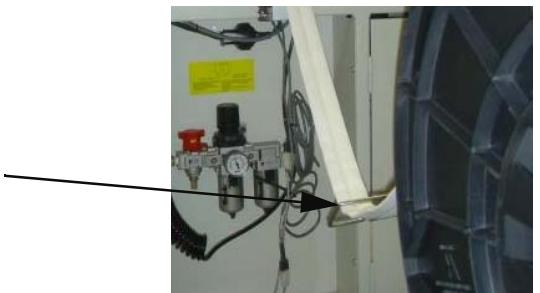

Adjustment: Release 2 cylinder nuts C & D and adjust screws until the Rotation Bridge is parallel with the machine stand.

Loading The Handle Material

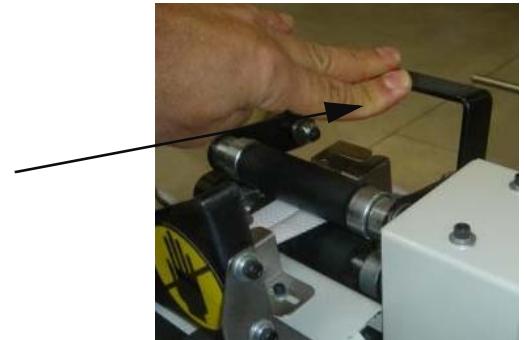

Step 1:

Feed the handle material thru the sensor rod.

Step 2:

Lift the upper puller roller and feed material through.

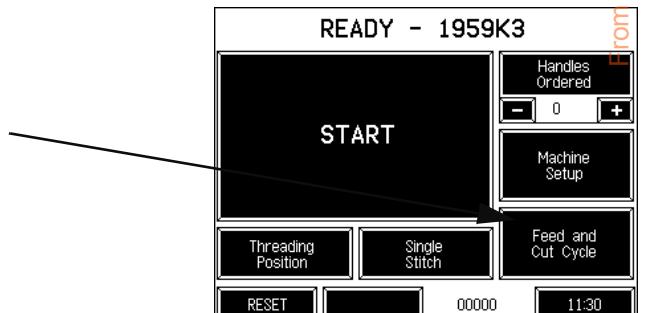

Step 3:

Feed the material between the lower and upper knife blades.

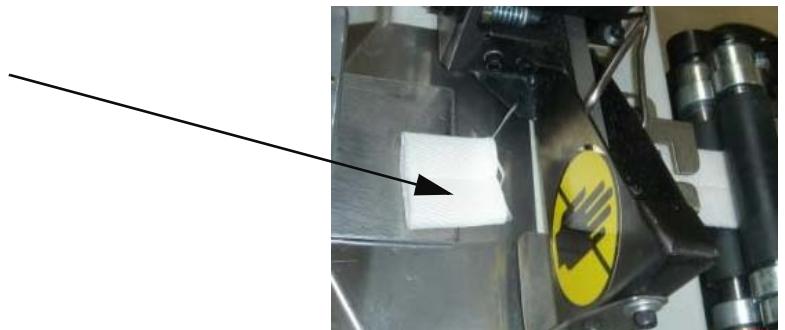

Step 4:

Press the "Feed and Cut Cycle" button.

Step 5:

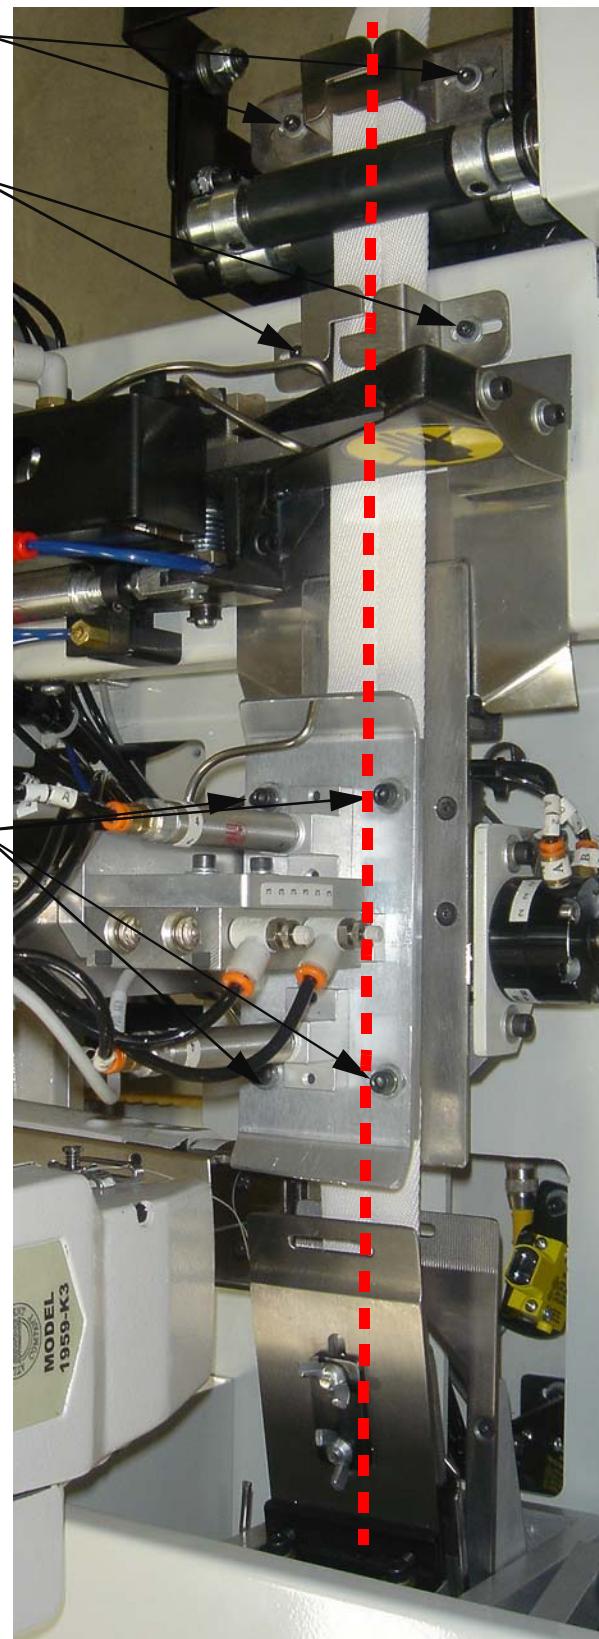

Remove the scrap material.

Aligning the Handle Material

The handle material must be centered with the folding station.

1. Adjust the 2 guides according to handle width.

2. Adjust the 2 guides according to handle width.

3. Adjust the 2 center guides according to handle width.

4. Verify that the handle material is aligned with all components. Also be sure the guides are close enough to the material to keep it from moving side to side but loose enough for the material to be fed freely.

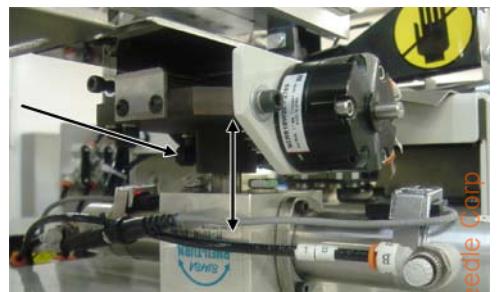

Adjustments When Material Thickness Changes

When changing to a thicker or thinner material than what was previously sewn, the following adjustments must be made.

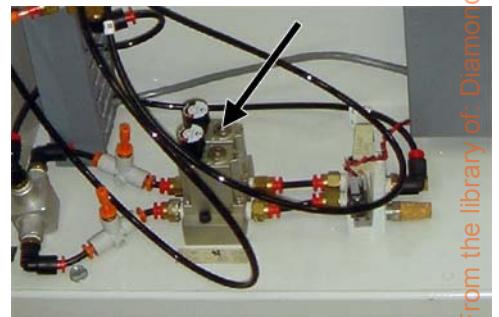

1. Adjust the distance between the transfer bridge and the lower folding plate so that there is enough gap to allow the material to fold.

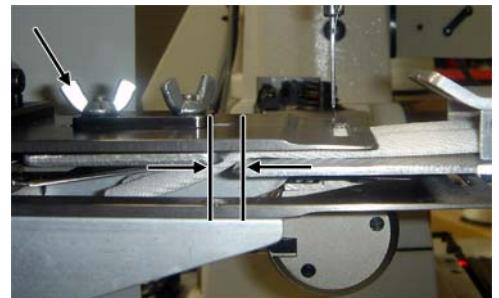

Adjustment: Loosen the two screws that hold the bridge rotation tower. Move the tower up or down as needed to create the gap needed to allow the material to fold. Tighten the two screws.

2. Adjust the air pressure as needed. Too much pressure will prevent the lower plate from returning to its home position.

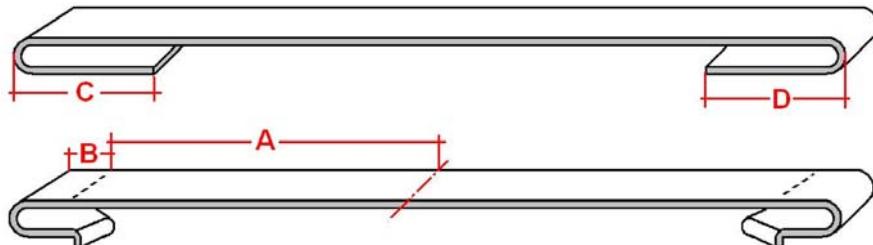

3. Loosen the two wing nuts and adjust the distance between the handle stop plate and the edge of the transfer bridge so that the material fits. Tighten the two wing nuts.

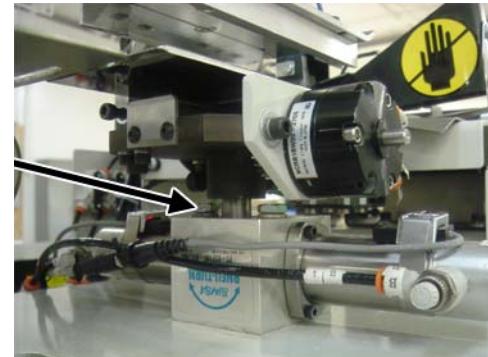

From the library of: Diamond Needle Corp

Handle Dimensions

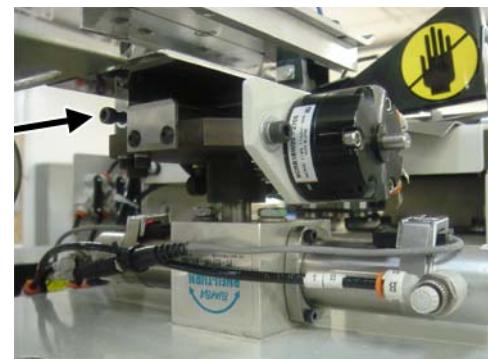

A - The distance from the center of the handle to the sewn seam.

To adjust this distance, loosen the two screws on the rotation bridge and move as required. It is important to keep the rotation bridge parallel to the edge of the machine.

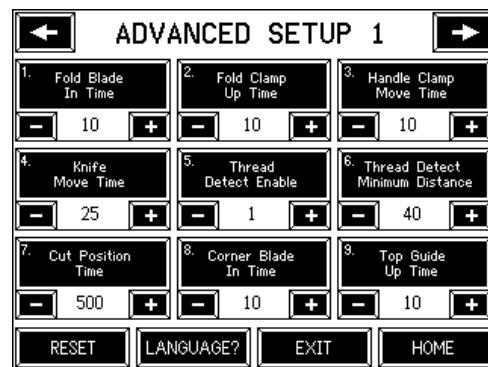

B - The distance from the sewn seam and the edge of the handle.

Use the two side limit screws on the transfer bridge to adjust this distance.

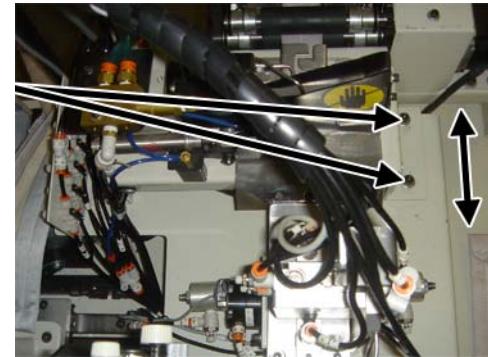

C - The distance between leading edge of the handle to the edge of the first folded tab.

Increase or decrease the number shown in the "Cut Position Time" in the Advanced Setup 1 screen.

D - The distance between the trailing edge of the handle to the edge of the second folded tab.

Adjust this distance by loosening the 4 screws that mount the cutting station and moving forward or backwards as needed.

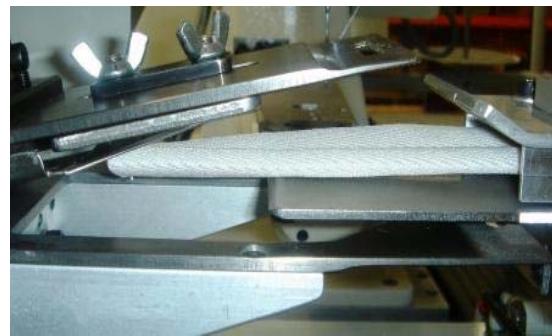

Folding Steps

1. Home Position

2. Bridge moves to the right.

3. Handle is loaded

4. Clamp Close

5. Inside plate moves forward
for first fold.6. Lower plate moves backwards
for second fold.

From the library of: Diamond Needle Corp

Electric Eye Sensor

Mount the sensor so that it is 2-6" from the material to be detected. The sensor does not have to be perpendicular to the material. An angle of up to 30 degrees can be used.

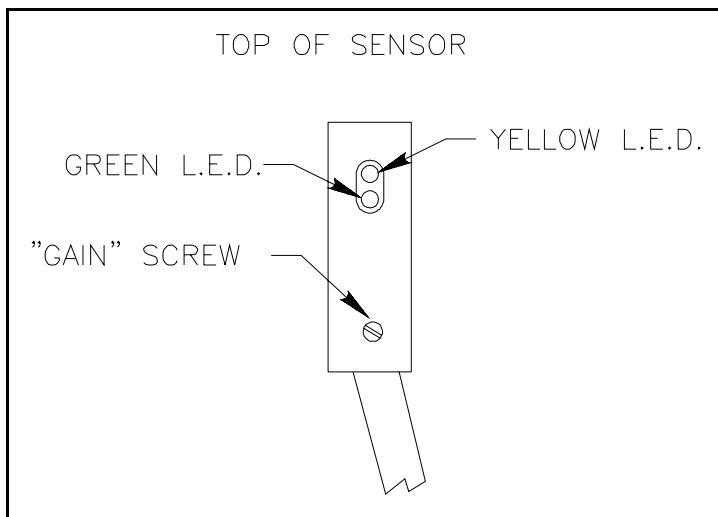

Operation:

The green LED indicates power on. If the green LED is flashing, it indicates an overload condition on the output and the sensor may be damaged. The yellow LED indicates the sensor is "seeing" material. If the yellow LED is flashing, it indicates the sensor output is marginal and the sensor needs to be adjusted.

Adjustment:

Adjust the "Gain" screw so that the yellow LED is on steady when the material is present and completely off when the material is absent.

When used as a "Roll Full Detector" on a rewinder, adjust the "Gain" so the yellow LED comes on only when the roll is full.

**Reflective Tape Maintenance**

Use a soft cloth for cleaning.

Do not use chemicals or abrasives to clean it.

Avoid any contact with oils and liquids.

Do not touch the tape with bare fingers.

If tape is dirty or opaque, the eye may not function correctly.

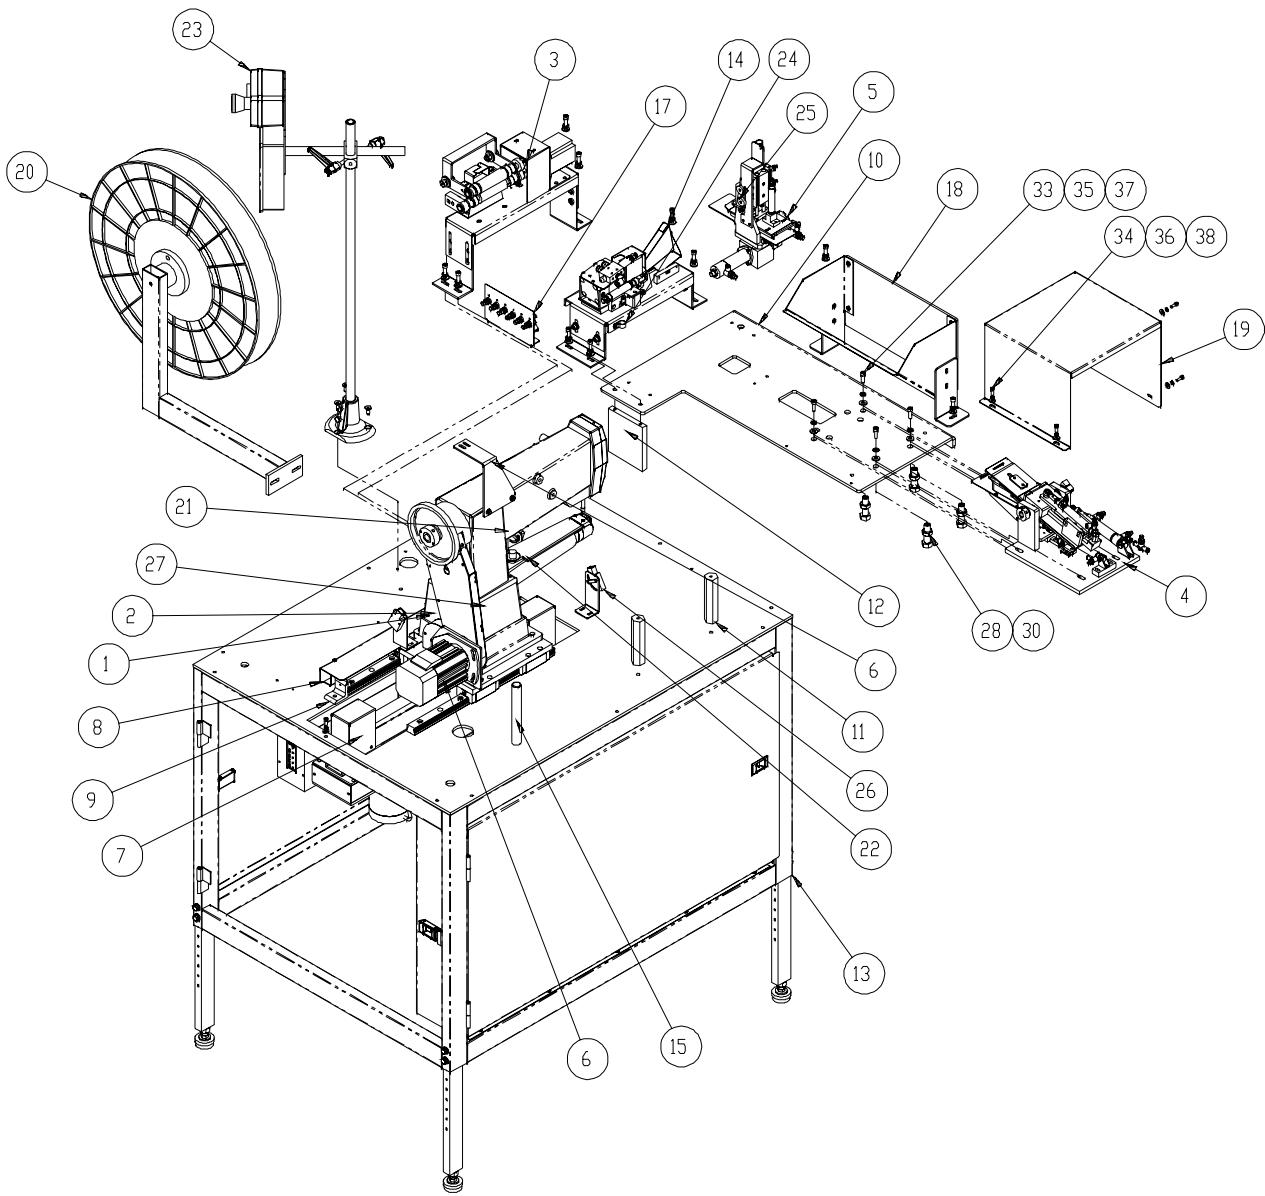

Assembly Drawings & Parts Lists
