# PARTS LISTS

## 4. CHECKING THE CARTRIDGE FILTER AND REPLACING IT

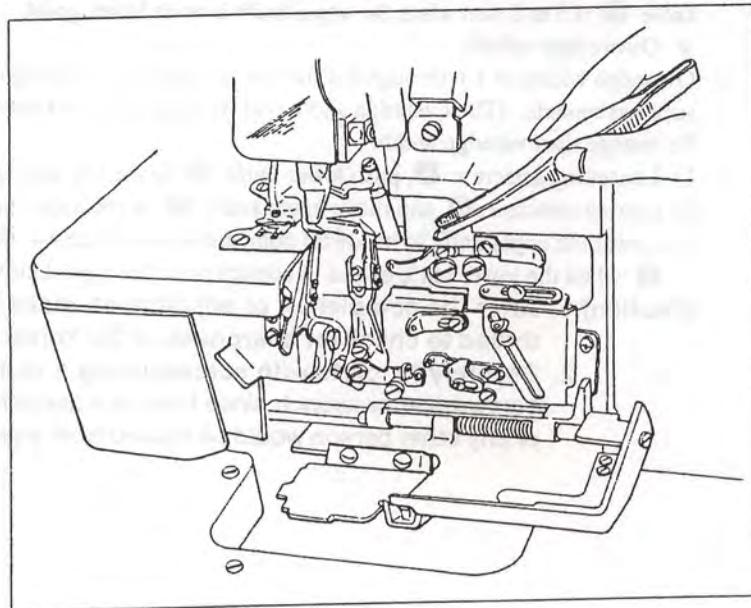

1. After a long period of usage, cartridge filter ① may become clogged with dust.  
If the machine is left in this state, the dirty oil may fail to pass through cartridge filter ①, and the machine may wear out abnormally, or a seizure may result.  
\* Cartridge filter ① should normally be checked once every six months, and cleaned or replaced accordingly.
2. How to inspect the cartridge filter and replace it
  - 1) Remove first oil discharging screw ②.
  - 2) Remove screws ③, and lift top cover ④ just above until it comes off.  
**(Caution)** If top cover ④ is shifted sideward, the oil amount pointer bar and the cartridge filter may be damaged.
  - 3) Remove cartridge filter ① and check it. If the filter is found to be abnormal, clean the relevant components, or replace cartridge filter ①.
  - 4) Re-insert cartridge filter ① into its proper position and return the cover. Do not forget to put back the setscrews and tighten them up.

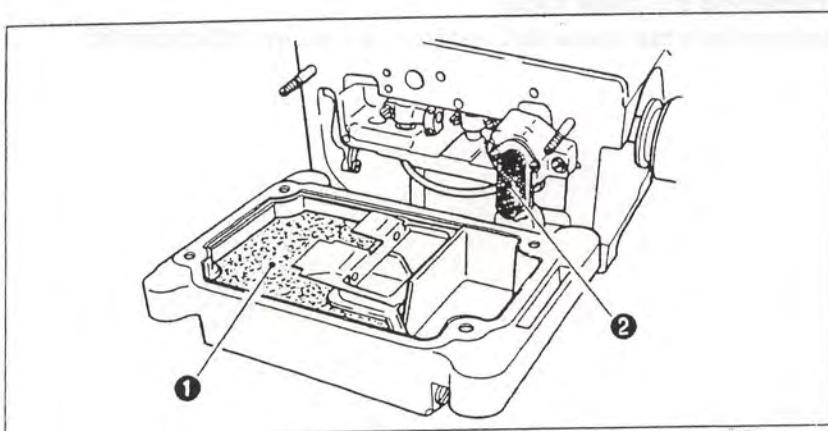

## 2. CLEANING THE MACHINE HEAD

- 1) Clear lint from inside the looper cover and the needle bar components about once or twice a day. If not, oil may leak and the sewing material will be soiled.

(Caution) Do not wipe the coated surface of the machine head with lacquer thinner. Doing so will damage the coated surface.

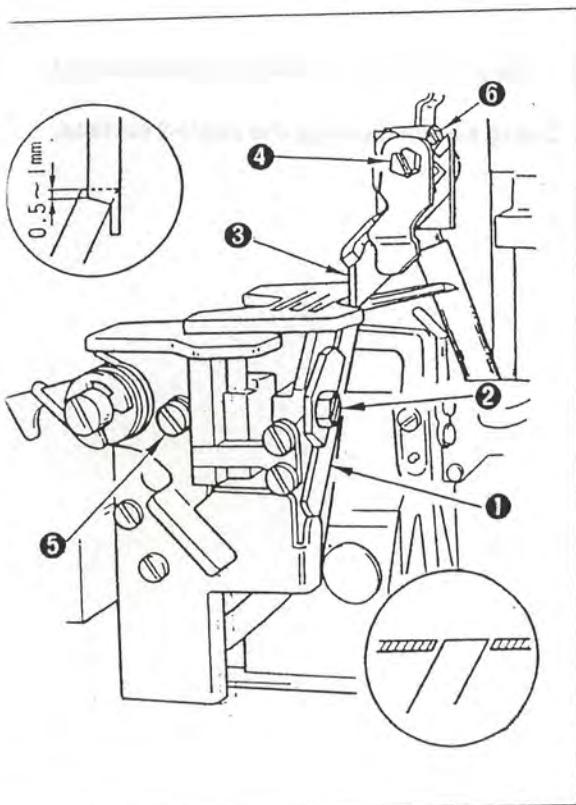

## 3. CLEANING THE FILTER AND PUMP NET

- 1) To use the sewing machine for an extended period of time, clean filter ① and pump net ② periodically twice or three times a year. If the filter and pump net are clogged with dusts, etc., the machine components may be seized or worn out extraordinarily. So, carefully check the filter and pump net.
- 2) If the lubricating oil in the machine is stained, change the oil also at the time of cleaning. Refer to "III . 1. LUBRICATION" for how to change the oil.

## 1. KNIVES AND OVEREDGE WIDTH.

### \* Height of the lower knife

Loosen setscrew ② and adjust the height of lower knife ① so that its edge is flush with the throat plate surface.

### \* Height of the upper knife

Loosen setscrews ④, and perform adjustment so that upper knife ③ overlaps lower knife ① 0.5 to 1 mm when the upper knife is at its lower point.

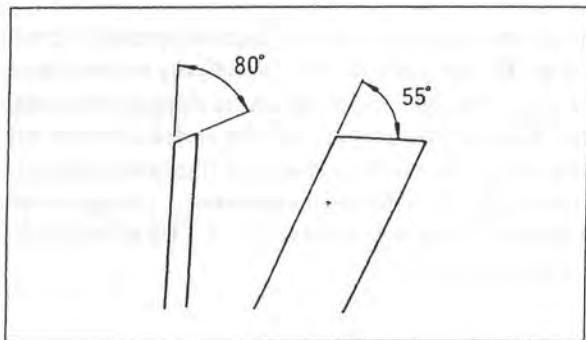

### \* Overedge width

Overedge widths of 1.6 through 6.4 mm are provided by changing the parts or by using subclass models. (The overedge width will be slightly larger than the knife cut width)  
To change the overedge width:

- 1) Loosening setscrew ⑤, push lower knife ① to the left and fix it.
- 2) Loosen setscrew ⑥ and move upper knife ③ as required, then fix it.
- 3) Lower the upper knife to its lowest point and loosen setscrew ⑤. Tighten setscrew ⑤ when the lower knife comes in contact with the upper knife.

(Caution) 1. After the completion of adjustment, make the knives cut a thread to check for sharpness of the knives.

2. Securely fix parts with screws using a comparatively large screwdriver or wrench since there is a danger that the operator or any other person would be injured from a parts that come off.

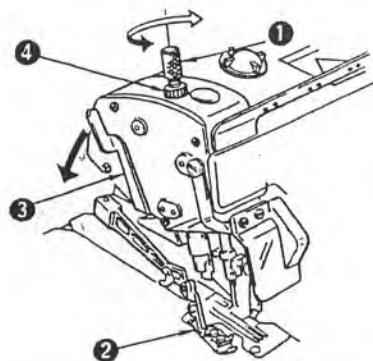

### \* Resharpening the lower knife

When the lower knife has become dull, resharpen it as shown in the figure left.

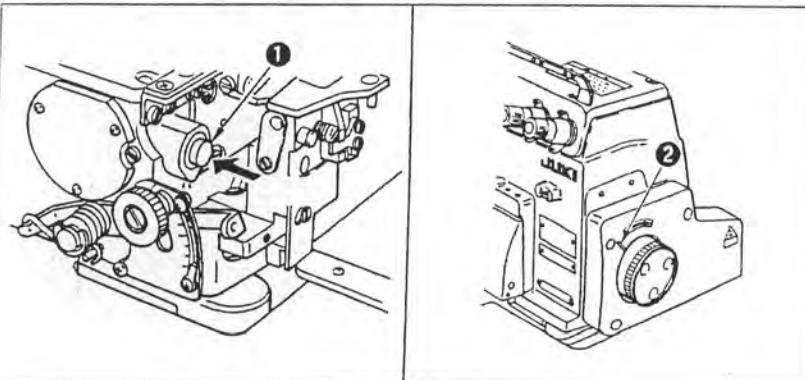

# **MAINTENANCE OF SEWING HEAD**

## 5. ADJUSTING THE PRESSURE OF THE PRESSER FOOT

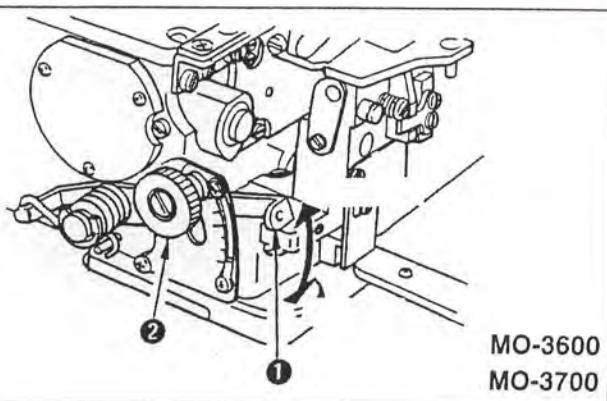

- 1) Adjust the pressure of the presser foot by loosening first nut **④** and turning presser foot adjust screw **①**. When the adjust screw is turned clockwise, the pressure will increase. When it is turned counterclockwise, the pressure will decrease. After the adjustment, be sure to turn nut **④** without fail.
- 2) To open presser foot **②** sideward, raise the needle to the highest position of its stroke and lower presser bar lifting lever **③**.

## 6. ADJUSTING THE STITCH LENGTH

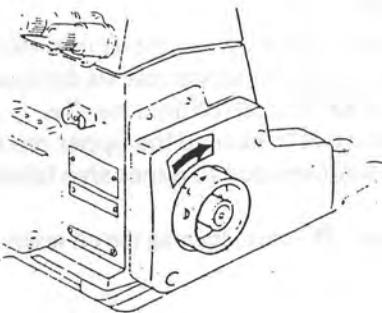

- 1) Slowly turn the handwheel as you keep depressing pushbutton **①**, and you will find a point at which the pushbutton goes in farther.
- 2) With the above condition maintained, align the desired scale mark on the handwheel with mark **②** on the belt cover.
- 3) Reset the pushbutton after setting the dial.  
**(Caution)** Confirm that pushbutton **①** has returned to its original position before starting works since there is a danger that the machine parts may be damaged or the operator or any other person may be injured.

## 7. DIFFERENTIAL FEED MECHANISM

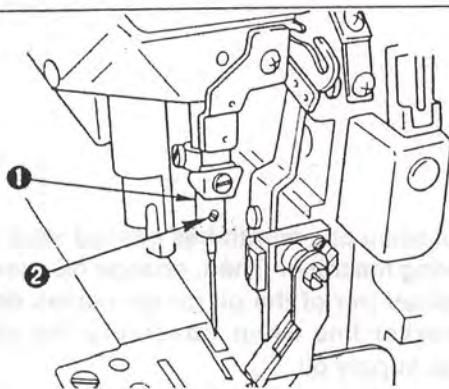

- 1) Loosen differential feed lock nut **②**. Move lever **①** up for stretching stitch or down for gathering stitch.
- 2) When the differential feed adjusting lever is set to graduation S, the machine will perform stretching with a differential feed ratio of 1:0.7. When the lever is set to graduation 0, the differential feed ratio between the main feed dog and the differential feed dog will be 1:1.
- 3) The maximum differential feed ratio for gathering is 1:2. The graduations beyond 0 are used as reference.  
(It can be set to 1:4 depending on the adjustment of the internal mechanism of the sewing machine. MO-3700)

## 2. CHECKING THE DIRECTION OF ROTATION

- 1) The correct direction of the sewing machine is clockwise. Never allow the machine to rotate in the reverse direction. If the machine rotates counterclockwise, the oil pump will fail to function resulting in seizure.

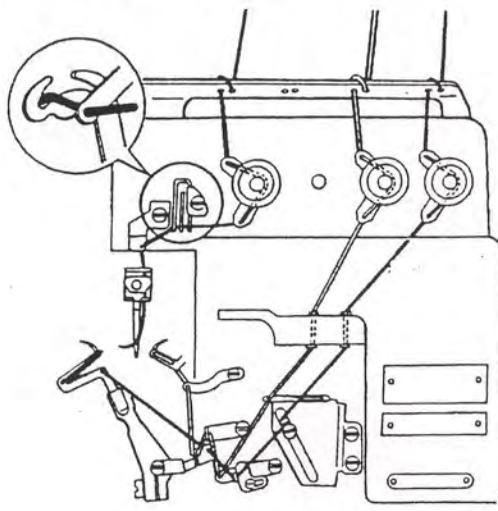

## 3. ATTACHING NEEDLES

Attach the needles according to the following procedure:

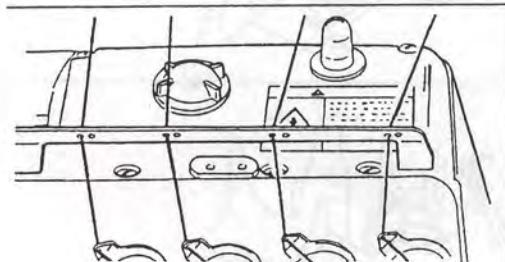

- 1) Bring needle clamp ① to the highest position.
- 2) Loosen needle clamp screw ②, and fully insert the needle into the needle clamp hole with the needle recess facing backwards as viewed from the operator's side.
- 3) Tighten the needle clamp screw ②.

## 4. THREADING THE MACHINE

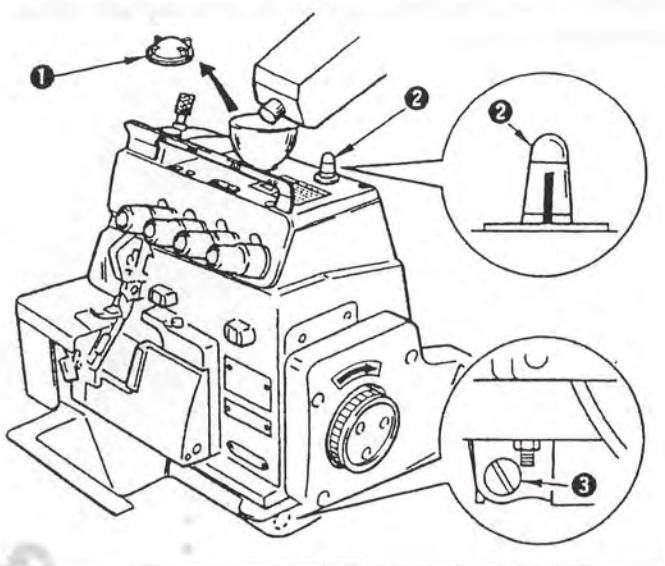

### (Caution)

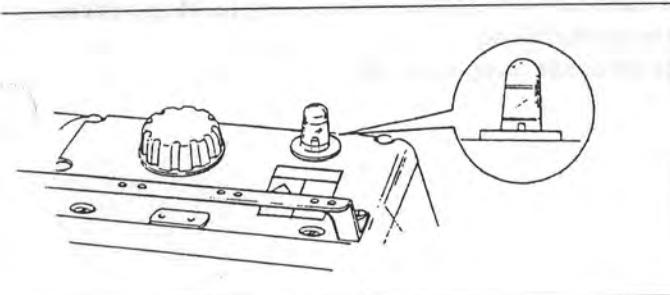

When using an untwisted thread such as wooly nylon thread or weak thread, do not wind it round the Intermediate thread guide.

## 1. LUBRICATION

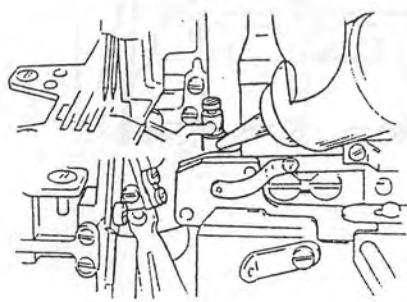

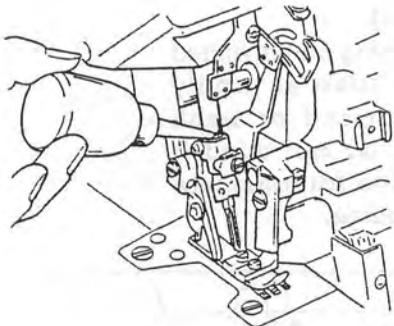

- 1) Remove oil cap ① .
- 2) Pour New Defrix Oil No. 2 into the oil reservoir.
- 3) Supply oil until the pointer bar almost reaches the upper red marker line when oil gauge ② is observed from the side.  
**(Caution)** Be careful not to exceed the upper red marker line, or else troubles due to excessive lubrication may result.
- 4) Remove oil drain cap ③ when draining the oil reservoir.

**(Caution)**

Change oil when one month has passed after the first set-up of the sewing machine. Then, change oil every six months.

- If the pointer bar of the oil gauge comes down under the lower marker line when observing the oil gauge from sideward, supply oil.
- Apply two or three drops of oil to the needle bar and upper looper guide when operating the machine for the first time after set-up or after a long period of disuse.
